DEUTA Press Release
March 2016

DEUTA returns to its Berlin roots with terminal applications

DEUTA-WERKE was founded in 1905 in Berlin and has been producing speed measurement solutions such as sensors, indicating units, travel data recorders and Multi-Functional Terminals for 111 years. DEUTA's key business concentrates on the railway vehicle industry and the Deutsche Bahn was the reason why DEUTA moved its headquarters to Bergisch Gladbach in the Rhineland in the mid-1950s.

Today DEUTA-WERKE is the market leader, among other things, in the field of safe Multi-Functional Terminals for railway vehicles. The patented Trust technologies IconTrust® and SelectTrust® in the terminals ensure that the vehicle driver can rely on the displayed information such as speed and train safety signals. IconTrust® guarantees for example the safe display of speed values and SelectTrust® for instance the safe input of train data. The functional principle of these safe DEUTA technologies is tested by experts of the TÜV Nord and certified by a safety standard, the so-called Safety Level.

The family business carries on the tradition of close customer co-operation with the continuing course of expansion in the field of safe terminals. DEUTA-WERKE is adding the *Terminal Applications* competence field to its service portfolio in spring 2016. Hereby, DEUTA is returning from Bergisch Gladbach to the roots of its founding in Berlin with a technical office. Here, the software specialists will be concentrating on the programming of the application software for DEUTA Multi-Functional Terminals. The continuous development of the application software sector is the consistent step for the traditional DEUTA-WERKE company to underline its dominance in the field of safe terminals for railway vehicles. Jörg Valeske, an experienced manager from the terminal applications sector, was appointed to head the Berlin site by the managing directors Dr. Rudolf Ganz (Technical) and Thomas Blau (Commercial). Jörg Valeske has been previously active as a Group Leader for software application in the Bombardier railway vehicle company and is intimately familiar with the customer requirements for operating interfaces. The applications must have an attractive ergonomic design but at the same time meet the formal requirements of the railway standards in order to serve as a reliable man-machine interface.

DEUTA-WERKE is a pioneer in the proven, safe representation on terminals in railway vehicles. DEUTA has already been supplying terminals for local and long-distance transport including expert safety certification with IconTrust® for safe SIL 3 display and SelectTrust® for safe SIL 2 input for five years. This technological lead has also been reflected in the last two years by the highest sales figures in the company's history.
